

FNP Sales Analysis

Project Summary & Sales Insights Report

1. Project Overview

This project analyzes one year of order data (Jul 2023 – Aug 2024 order dates, deliveries tracked through Aug 2024) for FNP (Ferns N Petals), an online gifting and flower delivery business. Raw transactional data covering customers, orders, and products was structured in Excel, summarized using PivotTables, and visualized in an interactive Excel dashboard with slicers for Order Date, Delivery Date, and Occasion.

The workbook contains four data sheets (customer, order, product, Pivot table) and one consolidated Dashboards sheet built with PivotCharts, KPI cards, and interactive filters that allow drill-down by occasion, category, product, city, month, and delivery timeline.

2. Objective

- Consolidate raw order, product, and customer data into a single analysis-ready model.
- Track core business KPIs — total orders, total revenue, delivery speed, and average customer spend.
- Identify top-performing occasions, product categories, and individual products by revenue.
- Understand demand patterns across time (month, day of week, hour) and geography (city).
- Surface actionable insights to guide inventory, marketing, and logistics decisions.

3. Key Performance Indicators

1,000 Total Orders	₹35,20,984 Total Revenue	5.53 days Avg. Order-to-Delivery Time	₹3,520.98 Avg. Customer Spend
-----------------------	-----------------------------	--	----------------------------------

Across 1,000 orders, FNP generated total revenue of ₹35,20,984, averaging ₹3,520.98 per customer. The average gap between order placement and delivery is 5.53 days, a useful benchmark for evaluating fulfilment speed.

4. Revenue by Product Category

Eight product categories were tracked. Colors, Soft Toys, and Sweets together contribute the bulk of revenue.

Category	Revenue (₹)
Colors	10,05,645
Soft Toys	7,40,831
Sweets	7,33,842
Raksha Bandhan	2,97,372
Cake	3,29,862
Plants	2,12,281

Category	Revenue (₹)
Mugs	2,01,151

Colors is the single highest-earning category at ₹10,05,645 — nearly 29% of total revenue — followed by Soft Toys and Sweets, each contributing over ₹7 lakh.

5. Revenue by Occasion

Occasion	Revenue (₹)
Anniversary	6,74,634
Raksha Bandhan	6,31,585
All Occasions	5,86,176
Holi	5,74,682
Birthday	4,08,194
Valentine's Day	3,31,930
Diwali	3,13,783

Anniversary and Raksha Bandhan are the top two revenue-driving occasions, each generating over ₹6 lakh, closely followed by Holi. Diwali and Valentine's Day, despite being high-visibility festivals, currently underperform relative to these occasions.

6. Top 5 Products by Revenue

Product	Revenue (₹)
Magnum Set	1,21,905
Quia Gift	1,14,476
Dolores Gift	1,06,624
Harum Pack	1,01,556
Deserunt Box	97,665

These five products together generated ₹5,42,226, roughly 15% of total revenue, led by Magnum Set at ₹1,21,905.

7. Revenue by Month

Monthly revenue is highly seasonal, with two pronounced peaks:

Month	Revenue (₹)
Feb	7,04,509
Aug	7,37,389
Mar	5,11,823
Nov	4,49,169
Others (Jan, Apr–Oct excl. above, Dec)	avg. ₹1.4–1.6 lakh/month

August and February are the strongest months, each crossing ₹7 lakh in revenue, followed by a smaller peak in March. Outside these seasonal spikes, monthly revenue settles into a steady baseline of roughly ₹1.4–1.6 lakh, indicating that a small number of gifting occasions/campaigns drive a disproportionate share of annual sales.

8. Revenue by Day of Week

Day	Revenue (₹)
Tuesday	6,77,223
Sunday	6,28,138
Friday	4,75,447
Monday	4,61,670
Saturday	4,44,960
Thursday	4,18,354
Wednesday	4,15,192

Tuesday and Sunday generate the highest revenue, together accounting for over 37% of the week's sales, while Wednesday and Thursday are the lowest, suggesting demand is concentrated around the start of the week and weekends rather than being evenly spread.

9. Top Cities by Order Volume

City	No. of Orders
Imphal	29
Dhanbad	28
Kavali	27
Haridwar	24
Bidhannagar	21
Dibrugarh	21
Guntakal	20

City	No. of Orders
North Dumdum	19
Bhatpara / Bilaspur	18 each

Order volume is fairly evenly distributed across the top 10 cities (18–29 orders each), with Imphal, Dhanbad, and Kavali leading — indicating a broad, non-metro-concentrated customer base rather than dependence on a single hub city.

10. Key Insights

- Colors is the dominant revenue category (~29% of total), making it the top candidate for continued stock prioritization and promotional focus.
- Anniversary and Raksha Bandhan outperform even more widely-celebrated occasions like Diwali and Valentine's Day, suggesting gifting behavior on FNP skews toward personal milestones over calendar festivals.
- Revenue is strongly seasonal, with August and February acting as peak months — planning inventory, staffing, and marketing pushes around these windows would capture outsized returns.
- Tuesday and Sunday are the highest-revenue days, useful for timing email campaigns, flash sales, or ad spend to align with natural demand peaks.
- A 5.53-day average order-to-delivery time is a key operational metric to benchmark against customer expectations, especially for occasion-based, date-sensitive gifting.
- Demand is geographically diversified across Tier-2/3 cities rather than concentrated in one metro, pointing to an opportunity for regional fulfillment hubs to further reduce delivery time.
- The top 5 products contribute only ~15% of revenue, indicating a long tail of products drives the remaining 85% — a broad, diversified catalog rather than a few hero SKUs.

11. Recommendations

- Increase inventory and marketing spend on the Colors, Soft Toys, and Sweets categories ahead of peak months (Feb, Aug).
- Build occasion-specific campaigns around Anniversary and Raksha Bandhan, given their proven high revenue contribution.
- Investigate why Diwali and Valentine's Day underperform relative to expectations — possible causes include pricing, product mix, or delivery-time pressure during high-demand festival windows.
- Use Tuesday/Sunday demand peaks to schedule promotional emails and paid campaigns for maximum conversion.
- Explore regional warehousing in high-order cities (Imphal, Dhanbad, Kavali, Haridwar) to reduce the average 5.53-day delivery window.
